

Arch Linux Downloads

Release Info

The image can be burned to a DVD, mounted as an ISO file, or be [directly written to a USB flash drive](#). It is intended for new installations only; an existing Arch Linux system can always be updated with `pacman -Syu`.

Images for installing Arch can be downloaded via [BitTorrent](#) or right here in your browser from one of the [Arch HTTP\(S\) mirrors down below](#).

- **Current Release:** 2026.05.01
- **Included Kernel:** 7.0.3
- **ISO Size:** 1.4 GB
- [Installation Guide](#)
- **Resources:**
 - [Issue tracker](#)
 - [Mailing List](#)

Existing Arch Users

If you are an existing Arch user, there is no need to download a new ISO to update your existing system. You may be looking for [an updated mirrorlist](#) instead.

BitTorrent Download (recommended)

If you can spare the bytes, please leave the client open after your download is finished, so you can seed it back to others. **A DHT capable client is required.** A WebSeed capable client is recommended for fastest download speeds.

- [Magnet link for 2026.05.01](#) 📍
- [Torrent for 2026.05.01](#) 📁

Netboot

If you have a wired connection, you can boot the latest release directly over the network.

- [Arch Linux Netboot](#)

Docker image

The official Docker image is available on [Docker Hub](#). You can run the image with the following command:

```
docker run -it archlinux
```

VM images

Official virtual machine images are available for download on our [GitLab instance](#), more information is available in the [README](#).

WSL images

The official WSL image can be installed with the following command (in a PowerShell prompt from a Windows system with WSL 2 installed):

```
wsl --install archlinux
```

It is also available for download on [mirrors](#).

More information available in the [Wiki](#).

HTTP Direct Downloads

In addition to the BitTorrent links above, install images can also be downloaded via HTTP from the [mirror sites listed below](#). Please ensure the download image matches the checksum from the `sha256sums.txt` or `b2sums.txt` file linked below.

Checksums and signatures

File integrity checksums and PGP signatures for the latest releases can be found below:

- ISO
 - [PGP signature](#)
 - **PGP fingerprint:** [0x54449A5C](#)
 - **SHA256:** `4af795aab6530e8344553961d0a0e8e84f9622a131ee7d44b0b86b035b2d9ff7`

- **BLAKE2b:**
2ecbbc0290162e09088c320ce0a09024a4542f9f37468e4175333cc286781f175b87552e6bdec89738b923a576ad819fd24e58fb6286b6f7a56c6c858a64767
- Bootstrap tarball
 - [PGP signature](#)
- [sha256sums.txt](#)
- [b2sums.txt](#)

Download verification

Verify the BLAKE2b checksums as follows:

```
$ b2sum -c b2sums.txt
```

To verify the PGP signature using Sequoia, first download the release signing key from WKD:

```
$ sq network wkd search pierre@archlinux.org --output release-key.pgp
```

With this signing key, verify the signature:

```
$ sq verify --signer-file release-key.pgp --signature-file archlinux-2026.05.01-x86_64.iso.sig archlinux-2026.05.01-x86_64.iso
```

Alternatively, using GnuPG, download the signing key from WKD:

```
$ gpg --auto-key-locate clear,wkd -v --locate-external-key pierre@archlinux.org
```

Verify the signature:

```
$ gpg --verify archlinux-2026.05.01-x86_64.iso.sig archlinux-2026.05.01-x86_64.iso
```
